

Medical Alert

Patient lacks parathyroid hormone and is at risk of hypocalcemia

calcium crisis can be life threatening

I have HypoPARathyroidism a RARE endocrine disorder

I may require EMERGENCY TREATMENT

- **IMMEDIATE Calcium blood test**

Patient may be experiencing tetany, seizures, laryngospasm, cramping, nausea, tingling
Check calcium (ionized and serum), albumin, kidney function and EKG

- **If hypocalcemic, administer calcium gluconate I.V.**
- **Contact Physician for more clinical information (see reverse)**
- **Frequent monitoring of calcium until stable**

For more information on clinical presentations and management guidelines go to www.hypopara.org
